

### IRM-V5xxM3/TR1

#### **Features**

- · High protection ability against EMI
- · Available for various carrier frequencies
- · Min burst length: 8 cycles
- · Min gap length: 12 cycles
- · Low operating voltage and low power consumption
- · High immunity against ambient light
- · High immunity against TFT and PDP backlight
- · Long reception range
- · High sensitivity
- · Pb free and RoHS compliant

### **Descriptions**

The device is miniature SMD type infrared receiver that has been developed and designed by utilizing the latest IC technology.

The PIN diode and preamplifier are assembled onto a lead frame and molded into an epoxy package which operated an IR filter. The demodulated output signal can directly be decoded by a microprocessor.

### **Applications**

- · Light detecting portion of remote control
- · AV instruments such as Audio, TV, VCR, CD, MD, etc
- · Home appliances such as Air-conditioner, Fan, etc
- · Other devices using IR remote control
- · CATV set top boxes
- · Multi-media Equipment

### **Application Circuit**

### **Block Diagram**

The RC Filter should be connected closely between Vcc pin and GND pin.

#### **Test Method**

The specified electro-optical characteristic is satisfied under the following Conditions:

- 1. Measurement environment
  - A place without extreme light reflected
- 2. External light

Ordinary white fluorescent lamps (Light source temperature 2856°K, Ee 10Lux) without high frequency modulation

3. Standard transmitter

A transmitter whose output is so adjusted as to **Vo=400mVp-p** and the output Wave form shown in Fig.-1.According to the measurement method shown in Fig.-2 the standard transmitter is specified. However, the infrared photodiode to be used for the transmitter should be  $\lambda p=940nm, \Delta \lambda=50nm$ . Also, photodiode is used of PD438B (Vr=5V)..

4. Measuring system According to the measuring system shown in Fig.-3

#### Label format

Moisture Classification-storage and used condition label

## Recommended method of storage

The following are general recommendations for moisture sensitive level (MSL) 4 storage and use:

- 1. Shelf life in sealed bag from the bag seal date: 12 months at < 40 °C and < 90% relative humidity (RH)
- After bag is opened, devices that will be subjected to reflow solder or other high temperature process must mounted within 72 hours of factory conditions < 30 °C/60%RH.</li>
- 3. If the moisture absorbent material (silica gel) has faded away or the IRM has exceeded the storage time. Baking treatment is required, refer to IPC/JEDEC J-STD-033 for bake procedure or recommend the conditions: 60±5°C for 96 hours.

#### **ESD Precaution**

Proper storage and handing procedures should be followed to prevent ESD damage to the devices especially when they are removed from the Anti-static bag. Electro-Static Sensitive Devices warning labels are on the packing.

### **Solder Reflow Temperature Profile**

#### Note:

- 1. Reflow soldering should not be done more than two times.
- 2. When soldering, do not put stress on the IRM device during heating.
- 3. After soldering, do not warp the circuit board.
